

Pointe Conception Medical Announces New Networked Camera Products for Education and Telesurgery

By Bruce Kennedy

Dated: Apr 19, 2009

Pointe Conception Medical announces new low cost products for the emerging doctors office procedures in Minimally Invasive Surgery. These new devices are designed specifically for ease of use and high functionality toward electronic patient records.

Pointe Conception Medical's Provides Unique Solutions for teaching centers and Education:

EndoHub-1.0™

EndoHub™ is the world's first FDA cleared networked endoscopic medical camera system. The patent pending EndoHub™ offers integral networking capabilities for network storage, control, access and EndoPresence™ for video over IP – ideal for teaching or remote viewing. EndoHub's integrated web browser based documentation system is unique in the industry. Surgical monitor touch screen interface provides an easy-to-use single device that offers image processing, live capture/display, USB/network storage and streaming video. Competitive systems require separate image documentation and networking solutions costing thousands of dollars to come close to the capabilities of the EndoHub™ system. The system provides cost effective solutions for the doctors office and surgery center markets not addressed by current products.

PCM products are in full production and provide a complete solution available for the MIS markets. PCM has firm order commitments and a solid pipeline of OEM customers and High Definition visualization products for the industry. Customers are from all areas of the industry including orthopedics, robotics and the exploding office markets. (Trend toward lower cost treatment centers)

Pointe Conception Medical (www.pc-medical.com) is focused on the development of efficacious, highly functional and cost effective endoscopic system solutions. PCM uses proprietary design and technology strategies to develop its high value products. PCM has developed low-cost overseas supply chains that are part of a medically-certified quality system (ISO13485/9001) and has created a unique, highly experienced technical and business development team. These strategies have enabled PCM to deliver high quality and advanced functionality solutions at a cost significantly below other manufacturers.
